

Dr. Hiroshi Tanaka is a Professor in the Department of Mechanical Engineering at Aichi Institute of Technology, Japan.

He received his Ph.D from Nagoya University Japan and worked as a MEMS process engineer in automobile parts company Japan for 20 years. His research interests include micromachining and

surface modification for MEMS or micro-parts. Presently, he is focusing on developing environmentally-friendly micromachining process, especially, low cost and safe “green” wet etching process and a method to improve cutting tool life by surface finishing.
